Best browser for downloading large files. Which is the best browser for downloading big files.

There are plenty of reasons why you might need to download something using Chrome on Android. Maybe you found an image that you want to use as a wallpaper, or you need to download a PDF for work and you're not near a computer. Whatever the case may be, it's easy to do. Open the Chrome web browser on your Android phone or tablet and go to the webpage where you want to download a file. To download an image, simply long-press on the image until the menu pops up. From the menu, tap "Download Image." The download progress will be shown at the bottom of the screen. When completed, you can tap "Open" to view the image. Chrome will also show the download progress in a notification, which you can tap to open the file. Downloading other files can be done in the same way, or you can tap the "Download" button or icon if one is available. For example, the button below can be long-pressed… …to bring up this menu. Tap "Download Link" to download the file. Tapping the button directly will also start the download. Whether you're downloading an image, audio file, PDF, or anything else, Chrome will always allow you to open it immediately after downloading. An easy way to see all of your downloads is to tap the three-dot menu icon in the top bar. Select "Downloads" from the menu. This will bring up a chronological list of everything you have downloaded in Chrome. Downloads from Chrome are stored in the "Downloads" folder on your device. You can view this folder with a file manager. Most Android devices come with a file manager app pre-installed, usually simply called "Files" or "My Files." If not, the "Files by Google" app is available for free in the Play Store. Open your file manager of choice and look for the "Downloads" folder. This is what it looks like in the "Files by Google" app. Regardless of the Android device you have, there will be a "Downloads" folder on it. The majority of things you download on your device, not just from Chrome, can be found in this folder. Tap Apps, then tap and hold an empty portion of the home screen or swipe up or down from the home screen to open the App Drawer.Tap MyFiles to open it. If you don't see it in your App Drawer, swipe left or right to go through your apps or look in Samsung or Tools.My Files groups all the files on your device in a variety of categories, making it easy to sort through and find what you're looking for. This article explains how to use the Samsung My Files app on your Samsung Galaxy device to find and organize your downloads. If you have at least a Samsung Galaxy 3, the app should be on your device. You can also download it from the Google Play Store if you have a compatible device. Unless you created a shortcut, the My Files app might be buried. Here's how to find it. Open the App Drawer. You can do this through a variety of methods, depending on the device. You can tap Apps, tap and hold an empty portion of the home screen, or swipe up or down from the home screen. If you don't see My Files, swipe left or right to go through your apps. It may also be in a folder, so look in Samsung or Tools if you don't see it in the App Drawer. Once you find it, tap My Files to open the app. From here, you can use it for a variety of functions. The Samsung My Files app groups all the files on your device in a variety of categories, making it easy to sort through and find what you're looking for. You can tap different sections, like Images or Documents, to easily find the things you're looking for. If you just downloaded something new, tap Downloads to enter your Downloads folder and access or delete files. When you tap a file, it opens with the corresponding app. If you tap and hold, you can select multiple files at once. Context-sensitive icons appear when you select files, making them easy to share or delete if needed. Thanks for letting us know! Get the Latest Tech News Delivered Every Day Subscribe Tell us why! Make the most out of the space and files on your Android device with the free AndroZip File Manager. Jack Wallen says it's the best file manager he has tried for the Android platform. If you have an Android phone, you know that being able to manage that precious data on your memory card will quickly drive a user to downloading a third-party file manager. The problem is figuring out which file manager has the most features and is the easiest to use. Of all the file managers I have tried for the Android platform, the one that stands heads above the rest is the free AndroZip File Manager, which supports Android 2.0 or better. Who's it for? AndroZip File Manager is for any Android user who wants to make the most out of the space and files on the device. Although many users are happy to never bother with the files on that memory card, a large cross section of users want to be able to control what is on that memory card, as well as be able to compress and/or send those files. With AndroZip, you have that type of control. What problem does it solve? If you have ever needed to access a file to either remove it, copy it, send it, compress it, etc ., you know that without a third-party tool, that task is next to impossible. With a good file manager, you are able to control what is on that memory card and what you can do with that memory card. With AndroZip, you can share files you have stored and compress files to save space. Key features Works with Zip, RAR, 7zip, gzip, tar, and bzip2 files Creates zip, tar, and gzip files Manage files and folders with a simple gui Search files Application manager included Short tap and long tap menus Send files Very small footprint Task killer included See more screenshots of AndroZip What's wrong? The only problem I have found with AndroZip (and this is really picking at nits) is that the only way to copy, delete, and paste files is via long tap menus. I would think copy/paste/delete would be good candidates for short tap menus; it's a much more intuitive solution, as many users don't even know about the long tap menu. Bottom line for business Power users (many of whom are business users) need this kind of control over their phone. This is the type of application that should come standard on the Android platform. It is the best file manager available for the Android platform. User recommendation Android (4.0+)/Web: PushBullet is a webapp and companion Android app that makes it simple to get files, documents, addresses, lists, and plain text—just about anything you want—from your desktop into your Android phone's notifications pane. From there, you can open it directly in any application you choose. There are plenty of ways to get files from your computer to your Android phone—you can email it to yourself, put the file in Dropbox and then open it on your phone, use Google Drive for documents—but none of those methods makes it as easy as PushBullet does. PushBullet's greatest strength is that anything you push goes right into your notifications pane where you can work with it instantly—you don't need to open another app, sync, or download what you sent yourself.When you push a file, a note, an address, or a list to your phone, PushBullet drops it into the notifications pane. Just tap the item in the notifications list and you'll be prompted to open it in the right application. If you push an address, you can choose Maps. If you push a document, you can choose whatever document reader you have installed. If it's a list, you can use Android's rich notifications to browse it and leave it in the notifications (like a shopping list, for example, only in your notifications bar) or open it in another app.The app is brand new, so expect a few quirks here and there. It's also free, and requires you download the Android app and select a Google account to pair the webapp and the Android app after installing. We tested it, and it works as advertised. It may not totally replace the old Dropbox trick, but it's a great way to get addresses and APKs right to your phone so you can use them immediately.PushBullet | via Hacker NewsPushBullet (Free) | Google Play via Pushbullet Blog Android updates its operating system regularly to include new features, fix glitches, and make your Android device run more smoothly. The newest version is Android 10, and it offers some great features you'll want to get your hands on. Installing the new OS is not too difficult. Before you install it, you have to make sure your phone is compatible with it and able to receive the latest update, which we can help you with. Then, we'll give you some advice about getting the update. Make sure you have the right phone Julian Chokkattu/Digital Trends Unfortunately, not every Android phone is going to be eligible for the Android 10 update. If your device is over 2 years old, has already received two major Android OS updates, or is a lower-end budget device, you might not be seeing Android 10 at all. We've collected rumors for each of the manufacturers in our Android 10 updates post, so you can check there for the latest news on a variety of devices. However, there are some devices which are a given. All of Google's Pixel phones have already received the update, while the latest flagship phones — like the Samsung Galaxy Note 10 range and Huawei's P30 range — are also highly likely to get the update. You can also safely assume any phone that took part in the Android 10 beta is likely to receive the update. The Android 10 beta program was the largest in Android's history, with an amazing 25 devices from 13 manufacturers taking part. Here's the list of phones that supported the Android 10 beta: Asus ZenFone 5Z Essential Phone Huawei Mate 20 Pro LG G8 ThinQ Nokia 8.1 OnePlus 7 Pro OnePlus 7 OnePlus 6T Oppo Reno Realme 3 Pro Sony Xperia XZ3 Tecno Spark 3 Pro Vivo X27 Vivo Nex S Vivo Nex A Xiaomi Mi 9 Xiaomi Mi Mix 3 5G Google Pixel 3a Google Pixel 3a XL Google Pixel 3 Google Pixel 3 XL Google Pixel 2 Google Pixel 2 XL Google Pixel Google Pixel XL Back up your data While the final Android 10 build won't be as risky as getting involved in a beta program, it's still a really good idea to backup your Android devices regularly and before committing to the upgrade. Make sure to back up your Android phone to your PC to make sure your precious data is as safe as houses. How to install Android 10 So your phone has been confirmed to be getting the Android 10 update — hurrah! Now what? Well, you may have to wait a while. Some manufacturers take a little while to push the update out, whether it's the speedier companies like Nokia, or the slowpokes of Samsung and LG. That usually comes down to how much work they have to do, and creating manufacturer UIs like Samsung's upcoming One UI 2.0 can take a significant amount of time. Thankfully, when your update is ready, it'll be pushed through to your phone and you'll be prompted to upgrade. You can either upgrade right then and there, or you can choose to have your phone install it at a later time when it's more convenient — you can even have it update overnight. If you're really, really excited about it (like us) then you can manually check to see if the update has come in. To do so, head to Settings > System > Advanced > System update > Check for update. If you're not using a stock Android phone, then your path to finding the updates section may be slightly different — for instance on Samsung phones, you can access Software update directly from the Settings app — but its almost always somewhere in your Settings. That's really all there is to updating to Android 10. Unsure of what's new in the operating system? Check out our Android 10 review. Editors' Recommendations
